

Submission from Hall's Pig Farm to Consultation on Phoenix Energy Gas Conveyance Licence Extension Proposal

To whom it may concern

Regarding the application to extend the gas network area, I am in full support of all areas being extended.

It is ideal for residential and commercial properties to obtain gas connectivity, The potential for renewable gas generators and providers to supply gas to the network is game changing for the whole of Northern Ireland, with regards to energy security, Road to Zero carbon pathway and economic benefits by creating a local industry and create cost savings to consumers.
